

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1 (Currently amended): A mobile terminal apparatus comprising: a display portion to be driven by a voltage applied thereto; and a display portion driving control unit which changes driving operation of the display portion by selecting either an interlaced scanning drive system or a sequential scanning drive system for driving the display portion, and

wherein the change of the driving operation is based on an operation condition of the apparatus itself wherein when the display portion driving control unit changes the driving operation, the display portion driving control means changes display contents of the display portion before or after the change of the driving operation;

wherein the display portion driving control unit changes the drive system so as to drive the display portion by sequential scanning when movie display is performed or when in a camera mode for operating a camera, and to drive the display portion by interlaced scanning when another display is performed.

Claims 2-3 (Canceled)

Claim 4 (Currently amended): The mobile terminal apparatus according to claim ~~[[3]]~~1, wherein the display portion driving control unit changes the drive system of the display portion into the sequential scanning as soon as the camera mode is started, and changes the drive system of the display portion into the interlaced scanning as soon as the camera mode is terminated and shifted to another operation mode.

Claim 5 (Previously presented): The mobile terminal apparatus according to claim 1, wherein when the display portion driving control unit changes the driving operation, the display portion driving control unit carries out the driving operation change in a period after scanning one screen in the display portion is completed and before scanning a next screen is started.

Claim 6 (Canceled)

Claim 7 (Previously presented): The mobile terminal apparatus according to claim 1, wherein the display portion driving control unit changes the driving operation and the driving voltage of the display portion in accordance with the operation

condition of the apparatus itself.

Claim 8 (Previously presented): The mobile terminal apparatus according to claim 1, wherein the display portion driving control unit changes the drive system of the display portion into interlaced scanning or frame inversion when the apparatus itself is in a standby state.

Claim 9 (Previously presented): The mobile terminal apparatus according to claim 1, wherein the interlaced scanning drive system is a three-line interlace drive.

Claim 10 (Previously presented): The mobile terminal apparatus according to claim 1, wherein the sequential scanning drive system is a one-line inversion drive or a frame inversion drive.
